

AI prompts

Below you will find some AI prompts I used throughout my development process.

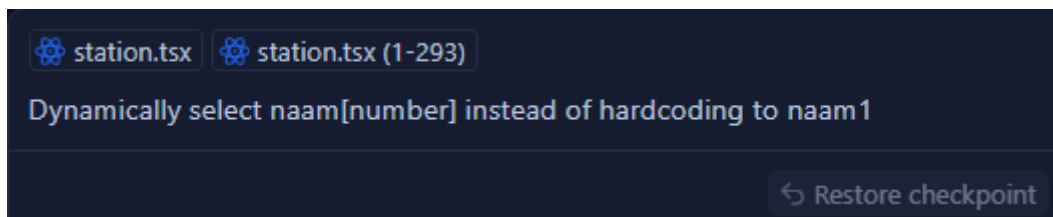

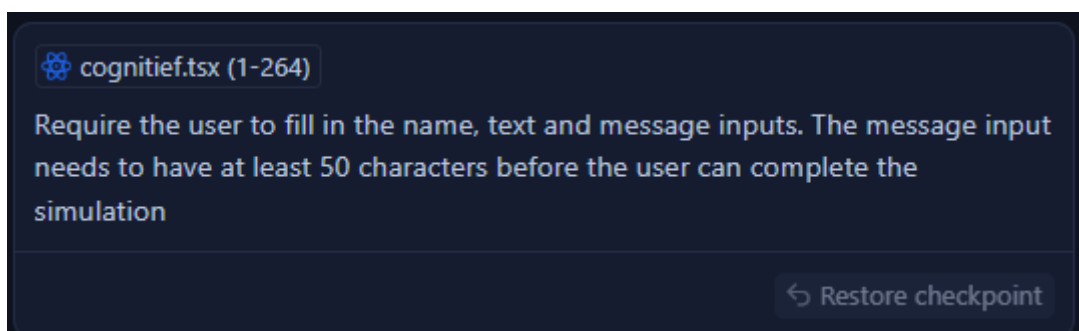

This prompt was designed to optimize the rendering of FAQ components in the Cardan project.

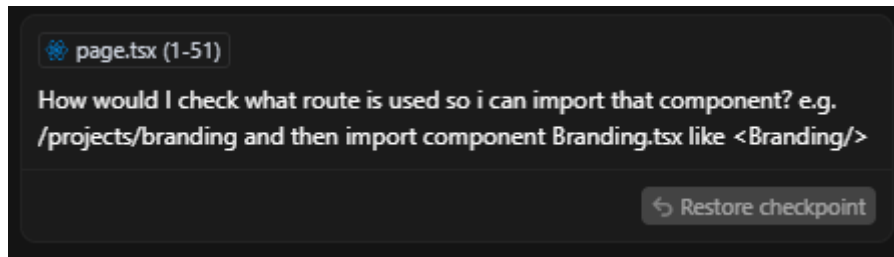

This prompt was used for the stations navigation on mobile view.

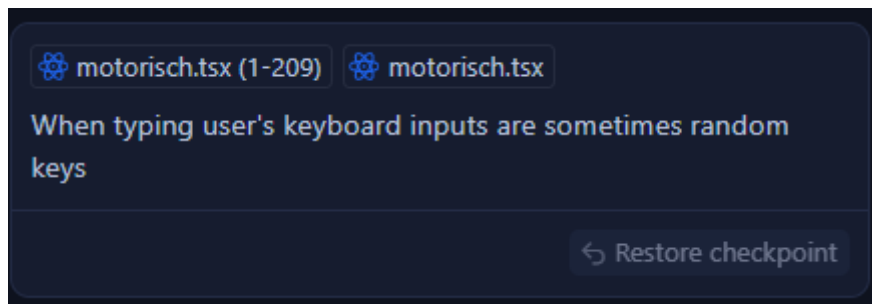

This prompt was used to add translations to the stations navbar. They needed to be dynamically changed instead of being hardcoded to "naam1".

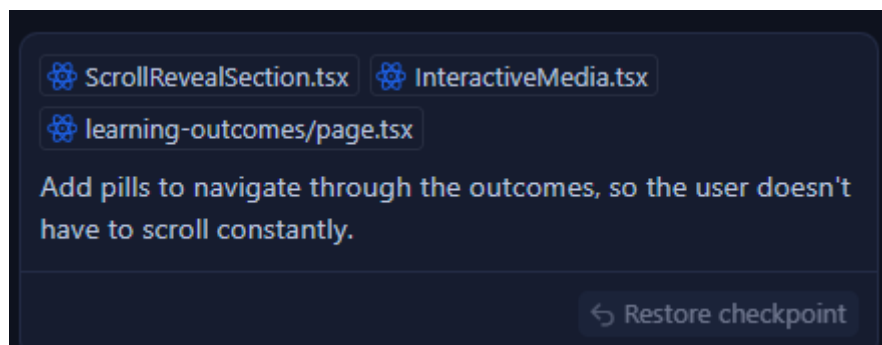

In the cognitive simulation, all input fields must be completed, and the message textarea must contain at least 50 characters.

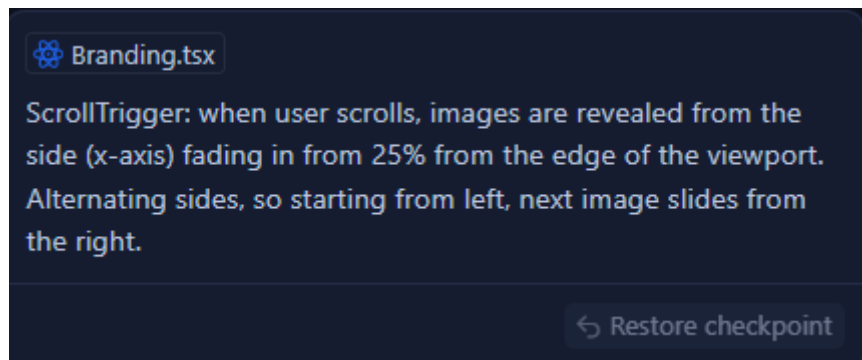

Due to the structure of my projects page using a [slug] system, creating individual components for each project and dynamically importing them has proven to be a much more efficient approach.

Motor impairment simulator functionality. This did however need some fine tuning.

Pills navigation to improve user experience on the learning outcomes page.

ScrollTrigger animation on individual project pages
